

ABSTRACT OF THE DISCLOSURE

5 A sales system for selling semiconductor devices  
by way of a communication network comprises a device  
information processing unit for obtaining function-  
related information on semiconductor devices to be  
possibly purchased from the client terminals by way of  
the communication network. The device information  
processing unit is arranged in a processor for  
presenting function-related information and price-  
10 related information on partially good semiconductor  
devices having one or more than one unusable functions  
and the functions specified in the function-related  
information obtained by the device information  
processing unit, prompting the client terminals to  
15 provide purchase/non-purchase information, obtaining  
purchase/non-purchase information on the partially good  
products from the client terminals and determining the  
possibility of successful transactions on the basis of  
the purchase/non-purchase information provided from  
20 client terminals.
